

Overview

The code in this replication package generates Table 2 and an extension of Table 7 from (Muralidharan et al 2019). Each table is generated in a separate code file, one from Stata and two in R. The replicator should expect the code to run in less than around a minute combined.

Data Availability

All data can be found in the original replication package on OPENICPSAR. They are all publicly available. The specific data I retrieved from (Muralidharan et al 2019) were cleaned and formatted by code I was not able to locate in their replication package.

Statement of Rights

I certify that the author of the manuscript has legitimate access to and permission to use the data used in this manuscript.

Details on each Data Source (Short descriptions directly from the original authors)

Dataset 1: *ms_blel_jpal_wide.dta*

Short description: This dataset includes selected baseline covariates on study participants and their scaled test scores on independent assessments of math and Hindi at baseline and endline, in wide format.

Dataset 2: *sc_results.dta*

Short description: This dataset includes the percent-correct test scores of study participants on school-based assessments of English, Hindi, math, natural sciences, and social sciences for the 2014-2015 and 2015-2016 school years.

Stata (code was last run with version 19)

- *outreg*

R 3.4.3

- *haven*
- *plyr*
- *fixest*
- *modelsummary*

- *tibble*
- *kableExtra*
- *gt*

Details The code was last run on a Apple M5 laptop with MacOS version 26.1 with 528GB of free space.
